

Outsourcing and offshoring of business and IT processes is an important way to reduce cost and increase speed, flexibility, and revenues. We help our clients evaluate whether a process should be outsourced or offshored by examining a number of factors of their specific organization, such as whether a process can be executed remotely and what level of collaboration is needed to complete a process. **When assessing consulting firms, make sure Arunam is on your short list. We'll clearly demonstrate – through our proven performance – why we're the best partner to help you maximize results.**

“Sourcing is no longer about cost cutting or competitive advantage ..the issue is that if you don't do it you won't survive”

*Chief Operating Officer  
Global Banking Firm*
